EVOLUTIONARIES • 2003 • EVOLVER USER FORUM SOUNDSET • rev1 • • • • • September 7, 2003

This is it, the soundset you've been waiting for: Three full banks of fresh new sequences and patches for the Evolver, all created by members of the Evolver online community.

This isn't just about quantity, though... there's some stunning quality in this soundset too, and lots of it.

A word to the wise: TIME. These sequences and patches take a long time to review. There are a lot of them, and many contain a lot of sonic detail and performance nuances. A quick 5 second preview of each program simply doesn't do them justice.

If you'd like some instant gratification before you dig in, try the following few sequences for a quick preview of what's inside:

- Massive (A015)
- Nostalgia (A042)
- Sweet Child O' Mine (A069)
- 10-8 v2 (A077)
- Endless Org (A120)
- Evo Pluck (A117)
- Sweet Dreams (C046)
- The Evolutionary (C062)

There's also an mp3 included of "The Evolutionary".

As good as this soundset is, I expect that quite a few of the sequences and patches within may end up in version 2 of the Evolver presets!

For conversation, help, instructions on how to load SysEx files (such as Evolutionaries.syx) into your Evolver, etc., be sure to visit the Evolver online community at the following links:

Last but hopefully not least, I tossed in a few pieces of Evolutionaries & Evolver artwork to decorate your computer desktops. A little eye candy to go with all the ear candy inside!

It was an immense amount of fun, and a great honor to compile all these sequences and patches, and package them for release. I'm confident you'll like them as much as I do.

Enjoy!!!

EVOLUTIONARIES • A FEW COMMENTS ON THE PROGRAMMERS' WORKS FROM SKI

DocT – Taken collectively, DocT's sequences are some of the best in the release. A few sweet patches, too!

Don – A collection of very musically useful arp-like sequences, plus more.

Linuxmanvan – Some very unique patches, doing some things you simply haven't heard before.

Mesadude1 – "Sweet Child O' Mine" sequence. 'Nuff said!

Mr. Rock – The words "cutting" and "cutting edge" continually come to mind when listening to his sequences. A couple of outstanding patches, too.

Noision1 – A continuing trend of the highest quality music from the Evo.

Paul – On average, probably the most musically useful patches in the collection, and some unexpected cool sequences hidden away to boot!

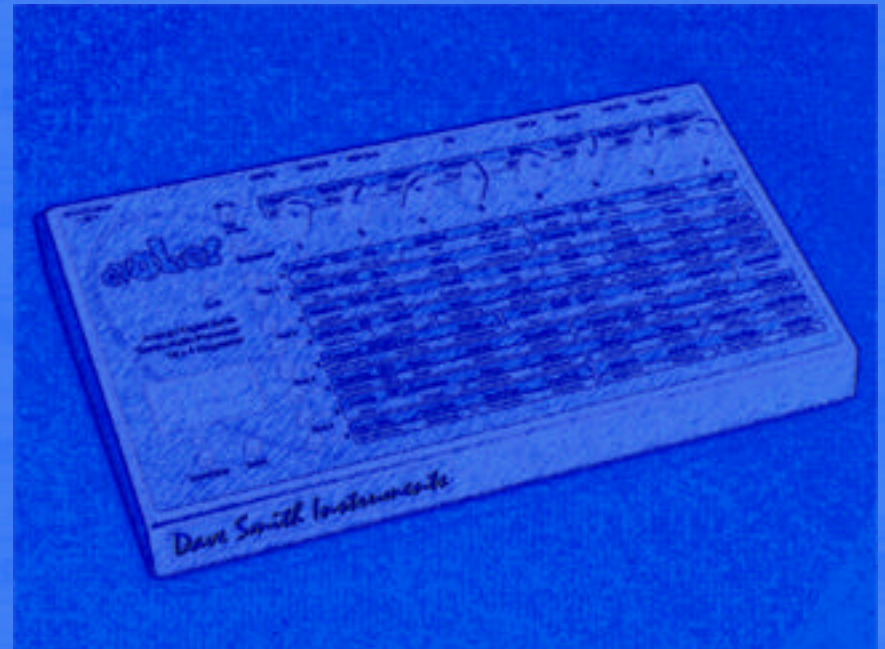

Spectralab1 – Avante garde in an Evo kind of way, that is to say... WAY different!

Swanoid – Great variety of styles, plus a couple of the best sequences in the bunch.

Synthlab - Endless... simply endless! The word "evolve" taken to the next level.

Zinoff – Step right up and get your TR Kicks!

Ski – (That's me!) It's rather difficult to comment on my own work. I attempted to put together a large collection of quality work in a variety of styles. Hopefully I succeeded to some degree, such that you'll find some sounds you really like.

And now... on with the show!
